AMERICAN SCRAPE

Give your modern home a rustic makeover with scraped hardwood flooring that's ruggedly beautiful and built to last. Crafted with a proprietary, random scraping technique, every board is one-of-a-kind and features the industry's most authentic visuals.

American Craftsmanship

Proudly made in the USA using domestically sourced lumber, a naturally sustainable resource.

Solid or Engineered

Both solid and engineered hardwood styles are available, so you can create a vintage look almost anywhere in the house — even the basement.

Outstanding Durability

Backed by our best warranty and protected by our lifetime finish, your floors will resist scratches, stains and wear for a lifetime of beauty.

Premium Solid Hardwood

Cold weather in the Appalachian Region makes for tighter, more consistent graining and less color variation than hardwood sourced from other regions. Choose from 100% solid Oak, Hickory or Maple in 3-1/4" or 5" widths.

Ruggedly Durable

The beautifully rustic hand-scraped visual provides the added benefit of easily hiding everyday wear. Coupled with a strong, protective finish, American Scrape is an ideal choice for busy households.

Engineered for Versatility

Choose engineered wood where solid can't be installed — like in basements or over concrete floors. American Scrape engineered features a variety of species in premium 5-3/4" width and 1/2" thickness.
